Hi HumanNature,

Congratulations — you've qualified for Round 1 of Code Jam 2022 — great work!

How does Round 1 work? There are three first rounds: 1A, 1B and 1C. Each lasts for two hours and thirty minutes. You can compete in as many of the sub-rounds (1A, 1B, and 1C) as you'd like. If you place in the top 1500 in any sub-round, you will qualify for Round 2 and you won't be eligible to compete in any later sub-rounds.

Round 1 schedule: Visit the schedule page to see rounds in your browser's local time zone and to add rounds to your calendar.

Unlike in the Qualification Round, collaboration is strictly prohibited in Round 1 and all future rounds. Section 7 of the Code Jam Terms prohibits sharing or using from others any information about a problem before the end of the round. Such actions that violate our Terms will result in your disqualification. Moreover, please note that if you are using a web integrated development environment (IDE), be sure to not publish your code or otherwise allow it to be publicly visible during the contest, or you could be subject to disqualification.

Check out the Qualification Round analysis to prepare for Round 1 and review the FAQs for helpful and important information about competing. You can also now access your participation certificate in your Competitions profile — your certificate will automatically update with your competition progress during the season.

See you on the scoreboard!
The Code Jam team
